This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).

Financial Strategy for Public Managers is a new generation textbook for financial management in the public sector. It offers a thorough, applied, and concise introduction to the essential financial concepts and analytical tools that today's effective public servants need to know. It starts "at the beginning" and assumes no prior knowledge or experience in financial management. Throughout the text, Kioko and Marlowe emphasize how financial information can and should inform every aspect of public sector strategy, from routine procurement decisions to budget preparation to program design to major new policy initiatives. They draw upon dozens of real-world examples, cases, and applied problems to bring that relationship between information and strategy to life. Unlike other public financial management texts, the authors also integrate foundational principles across the government, non-profit, and "hybrid/for-benefit" sectors. Coverage includes basic principles of accounting and financial reporting, preparing and analyzing financial statements, cost analysis, and the process and politics of budget preparation. The text also includes several large case studies appropriate for class discussion and/or graded assignments.

Learning Financial Accounting can often feel like learning a foreign language to students, in particular when terminology and procedure is piled on before core concepts are truly mastered. Introductory Financial Accounting for Business is an innovative approach that emphasizes critical thinking over the rote memorization of terms, such as "debits" and "credits". The sequential learning model employed by the authors helps students see the bottom-line consequences of financial statements as it relates to the overall business, better preparing them for careers as accountants, entrepreneurs, and decision-makers. The authors focus initially on conceptual underpinnings -- the reasons why we approach procedures the way we do -- rather than confusing students by front-loading the material with over-complicated details. Author Chris Edmonds has also created a highly popular and widely used series of video lectures, which engage students by clearly and charismatically going over each learning objective in a conversational style. These videos help reinforce important lessons and are always available for review. By developing this stronger foundation, students understand Accounting ideas more broadly and are able to ultimately learn procedural applications more quickly and accurately. With a straightforward writing style and highly engaging video lectures, this dynamic author team leads students down a streamlined learning path focused on critical thinking, clarity of concept, and applicability of material to the real world.

Unlike a Statement of Financial Accounting Standards, a Statement of Financial Accounting Concepts does not establish generally accepted Accounting Principles.
