This comprehensive volume provides teachers, researchers and education professionals with cutting edge knowledge developed in the last decades by the educational, behavioural and neurosciences, integrating cognitive, developmental and socioeconomic approaches to deal with the problems children face in learning mathematics. The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades, but the most part of this research has been conducted in non-applied settings and there's still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings. Now it's time to bring the results from the laboratory to the classroom. Apart from bringing the theoretical discussions to educational settings, the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments. It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues. And it does so from an international perspective, dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world. All of this makes the International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society.

This book focuses on news silence in Zimbabwe, taking as a point of departure the (in)famous blank spaces (whiteouts) which newspapers published to protest official censorship policy imposed by the Rhodesian government from the mid-1960s to the end of that decade. Based on archived news content, the author investigates the cause(s) of the disappearance of blank spaces in Zimbabwe's newspapers and establishes whether and how the blank spaces may have been continued by stealth and proposes a model of doing journalism where news is inclusive, just and less productive of blank spaces. The author explores the broader ramifications of news silences, tacit or covert on society's sense of the world and their place in it. It questions whether and how news media continued with the practice of epistemic deletions and continue to draw on the colonial archive for conceptual maps with which to define and interpret contemporary postcolonial realities and challenges in Zimbabwe. This book will be of interest to scholars, researchers and academics researching the press in contemporary Africa, critical media analysis, media and society studies, and news as discourse.

The role of education in human well being and social development cannot be overestimated. After a number of highly commendable policies on education in the first decade of independence, the education system in Zimbabwe has taken a tumble that needs both examining and rectifying. This volume analyses the challenges facing the education system in Zimbabwe and explores and scrutinises theoretical and practical possibilities for restoring the educational dream that was initiated at independence in 1980. The book is targeted at academics, scholars, college and university students, policy makers and other stakeholders and advocates a multi-pronged approach that must involve all stakeholders if educational retransformation, reconstruction and restoration are to be achieved. The authors provide a range of recommendations for a project that would restore the educational dream in Zimbabwe.
